Above is an MRI of a 45 year old man who presented to the hospital with a new onset of seizure disorder. After further work up, MRI was obtained and it (Figures 1 and 2) showed the patient to have a cyst in the right frontal lobe of the brain. He was diagnosed with Neurocysticercosis.

Figure 1: Initial MRI of brain showing Neurocysticercosis in right frontal lobe.
Figure 2: Arrow pointing at Neurocysticercosis of the right frontal lobe.
