Title: Sonographic Picture of Sjögren's Syndrome

Bacem AEO Khalele*

Diagnostics and Pathology, Ministry of Health, Cairo, Egypt

Figure 1: Sonographic picture characterizing a classic picture of Sjögren's syndrome.

This sonographic image characterizes a classic picture of Sjögren's syndrome (Figure 1) therein a heterogeneous echopattern of the glandular parenchyma is obvious along with atrophic diffuse cystic cavities. The overall picturesque recapitulates a characteristic "cribriform" appearance. Miliary sporadic calcifications are also conspicuous. Moreover, there appears a remarkable increase of vascularity on the Doppler interrogation.
