Figure 1: Auto amputation of great toe.

Figure 2: X-ray showing toe amputation.

### Clinical Image

A 23 year old girl admitted to the emergency department with auto amputation of the four toes of right foot after traumatic amputation of greater toe at the age of nine. On examination the toes were missing with no discharge and no redness (Figure 1). Here baseline investigations were absolutely normal and she had no other comorbidity and her X-ray of foot was done (Figure 2).
